플랫폼 제국의 미래

The Four : The Hidden DNA of Amazon, Apple, Facebook, and Google

구글,
아마존,
페이스북,
애플
그리고
새로운 승자

스콧 갤러웨이 지음 | 이경식 옮김

'IT 4대 제국'이 50년 안에 사라진다!
새로운 자리는 누가 차지하게 될 것인가?

신이 된 구글, 모든 것을 파는 아마존, 전 세계인의 친구인 페이스북과 가장 색다른 명품이 된 애플!
4차 산업혁명 시대를 지배하는 IT 공룡들의 플랫폼 전쟁과 그들을 위협하는 새로운 존재들을 파헤친다!

출간 즉시 실리콘밸리를 발각 뒤집은 2017 최고의 화제작!

Platform economics in nutshell

Digital
White Sharks

- At the top of the food chain -

Digital
Swordfish

- Big, fast, rarely get eaten -

Digital
Piranhas

- Small but aggressive for prey -

Platform

- Matching buyers with supplies that transact directly with each other
- A nexus of rules and infrastructures that facilitate interactions among network users (Eisenmann et al., 2011)
- Facilitating third party participation
- Providing building blocks that serve as the foundation for complementary products and services (Cusumano & Gawer, 2002)

Key Concepts

- **Modularity**: the degree to which a system's components may be separated and recombined, often with the benefit of flexibility and variety in use; reduce complexity by breaking a system into varying degrees of interdependence and independence across and "hide the complexity of each part behind an abstraction and interface
- **Interface**: a point of interaction between systems
- **Flexibility**: core that cannot change easily vs. peripheral that can change often
- **Two-side network effect**: hosts pull guests, and in turn guests pull hosts

Modularity (wikipedia)

- Ecological nuance: a key factor—along with diversity and feedback—in supporting resilience
- IT nuance: compartmentalization and interrelation of the parts of a software package
- Industrial nuance: a bundle of redundant project components that are produced en masse prior to installation
- Art nuance: the ability to alter the work by reconfiguring, adding to, and/or removing its parts

Four Tools of Platform Governance

- Rule: internal rules, external laws, regulation
- Norm: restrictions, peer pressure, nudge
- Architecture: programming codes
- Market: incentives, extrinsic motivation, give and take

Two Principles

- Transparency: pulling external resources, extension of platform
- Participation: owner, app developer, customer, partner, stakeholder

Research Inquiry

대한민국정부

Issues and Agendas for Mgm't

- Transparency of organizations (public and private): how can we find an optimal level and scope of transparency
- Core and peripheral: what is and what should be core/peripheral?
- Deciding modularity: what can be common, shareable, independent, and/or interdependent?
- Structuring platform organizations: lessons from sharing economy firms (airBnB, Uber)
- Designing online platforms: concerned about failures in online architecture design
- Responsibility and accountability of platforms

Issues and Agendas for Policy

- Regulation of business platforms
- Market share: New market? Existing market?
A winner takes all (too cheap price, quasi-monopoly)
- Data privacy and security: gathering data necessarily (un)intentionally
- Labor market: e.g., sharing economy firms
- Education: MOOC
- Energy: beyond smart grid
- Logistics
- Medical service

Other Issues in General

- Standardization and interoperability
- Sustainability of interface and protocols
- Support one or encourage competition among platforms
- Module becomes nudge or nanny?
- Institutionalization of platform lacks advantages of platform
- Dynamics between cores and peripherals over time

Platforms for Government

- Korea ON-Line E-Procurement System
(나라장터 g2b.go.kr)
- E-Petition (국민청원
<https://www1.president.go.kr/petitions>)
- Open Data Portal (공공데이터포털
www.data.go.kr)

Platforms for Government

- Functional typology of platforms for government
 - **Ideation:** e.g., coproduction
 - **Opinion:** e.g., petition
 - **Transaction:** e.g., procurement
 - **Public service delivery:** e.g., welfare, education...
- Ownership-based typology of platforms for government
 - **Government owns:** national, provincial, local
 - **Civil society owns**
 - **Industry owns**
